

Exercise 10:

Advanced Twig

Using filters

Lets use our node title to test some filters.

1. Near your other variable declaration in your theme's **node.html.twig** add:

```
{% set title_string = node.getTitle() %}
```

2. Test it with the following filters.

```
clean_class: {{ title_string|clean_class }} <br/>
upper: {{ title_string|upper }} <br/>
length {{ title_string|length }} <br/>
```

Questions you may have...

- How did you know to use `node.getTitle()` ?
